

DLM 26 – Digital Loudspeaker Management

The DLM26 is a DSP based 2 input x 6 output Digital Loudspeaker management processor, ideally suited for fixed installations and live events. It combines the functions of a multitude of conventional products in a compact 1U unit with extensive PC remote control capabilities.

Features Superb audio quality with premium hi-end AKM5392 24bit A/D converters and AKM 4396 24bit D/A converters, carefully optimized double precision signal processing coupled with 24bit conversion ensure a dynamic range >110db

The unit can work in STANDARD MODE or in DCL MODE. The first mode permit to configure the crossover in 2x2 way + SUB, 2x3 way or 6way, the input L, R, L+R are freely assignable to each output.

In DCL mode the unit can be configured in 3ch DCL, 2ch DCL + 2ch standard, 1ch DCL + 4ch standard. DCL mode mean double compressor limiter, each DCL channel have a double band limiter and compressor with assignable LO/HI split frequency. This is an exclusive feature in digital processor and it's very useful to protect two way passive filters with no passive attenuation in the crossover between LF woofer and HF driver. With DCL mode is possible to set two different threshold of protection for woofer and driver with the split frequency corresponding to the passive crossover frequency.

Each input has 5 fully configurable filters, a delay of 288.66ms max in step of 6.8us, gain. Each output has 4 fully configurable filters, a delay of 288.66ms max in step of 6.8us, gain, phase, LO-pass/Hi-pass crossover from 6 to 24db/Oct with standard or custom Q, RMS compressor with soft knee and peak limiter.

The 2 input levels are displayed by rows of 6 level LED + 1 clip led, the 6 output levels are displayed by rows of 5 level LED + 1 clip led + 1 Limiter led. The unit has 2 analog inputs, a stereo digital SPDIF input, and 6 analog outputs.

Linking functions between inputs and linking functions between outputs are available.

A function is allowing to have ramps closing the output level on parameter changes, when the unit is used as installation unit; this function can be excluded when the unit is used live and it is necessary to perform small changes to the set parameter...on the fly.

The Pc SW for the remote control via RS485 or USB is allowing to connect in net up to 32 units and is allowing to control full parameters of the processor, to show the phase of the filter setting

and to adjust graphically the RMS compressor and the Peak limiter. The comprehensive standard specification also include up to 64 memories with security lockout and two password level settings.

Special and new features:

- Hi-pass/Lo-pass/Shelving **custom Q** second order filters
- **RMS compressor and PEAK limiter on each output channel** with time constant and algorithm optimized for speaker thermal and mechanical protection while maximizing the output with no audible distortion
- **Input channel L, R or L + R freely assignable to each output channel**
- **Double Compressor Limiter Mode (DCL)** with two band RMS compressor and Peak limiter with adjustable HP / LP split frequency and separate parameter adj. This is an exclusive and very useful feature in general purpose digital processors
- **ALL PASS first and second order filters** useful for Cardioid SUB configurations, very precise phase crossover alignment, special pattern control array, alignment between different speakers and systems.

Specifications

Inputs:	XLR balanced +20dbu max level
Outputs:	XLR balanced +20dbu max level
Minimum Load:	150ohm
Total memories:	64
VU metering:	7 led for Inputs [-20dBu up to +15dBu; Clip] 7 led for Outputs [-20dBu up to +15dBu; Clip; Limit] Output Led can be used for displaying the Output level OR the Limiter activity
THD+N:	0.001% at 1kHz 0dBu
S/N:	>110dB
Frequency Response:	20Hz and 20kHz @ -0.5db
A/D and D/A Resolution:	24bits
Process Resolution:	24x32 bit for filtering process; 96 bits resolution on intermediate computation results
SPDIF input:	32 – 44.1 – 48Khz accepted
Display:	Graphic 2x20 characters
Filters (5 each in/out)	
Type:	Peaking EQ, Hi-Shelving 1/2/Q, Lo-Shelving 1/2/Q, HPF 1/2/Q, LPF 1/2/Q, All Pass 1/2 , Band pass, Notch
orders:	symmetrical Bell or High/Low Shelving up to second

Filter gain:	order for Bell and Shelving the gain is ranging from -15dBu up to +15dBu by 0.5dBu resolution steps
Centre frequency:	selectable with a 1/24th of octave resolution steps from 20Hz up to 20kHz
Filter Q/BW:	Q from 0.05 up to 3 by 0.05 resolution steps

Compressors

Threshold:	-10 to +20dbu
Ratio:	1:1 to 32:1
Soft Knee:	0 to 100%
Attack Time:	10ms to 4s
Release Time:	0.1 to 3s

Limiters

Threshold:	-10 to +20dbu
Attack time:	2ms to 50ms
Release Time:	20ms to 200ms

High pass and Low Pass Filters

HPF:	from 1st order (Butterworth -6dB/Oct) up to 4th Order (Butterworth, Linkwitz or Bessel -24dB/Oct), Custom Q
LPF:	from 1st order (Butterworth -6dB/Oct) up to 4th Order (Butterworth, Linkwitz or Bessel -24dB/Oct), Custom Q
Filter's setting step:	1/24th of octave

Delay & Gain

Maximum Delay:	288.66ms by 6.8us increment/decrement step, on each Input and Output channel
----------------	--

Spdif input gain(Digital):	0dBu on RCA connector
----------------------------	-----------------------

Physical:

Net Dimensions (WxHxD):	48 x 4 x 22 cm - 19" (1U rack)
-------------------------	--------------------------------

Net Weight:	2.8 Kg
-------------	--------

Transport Dimensions (WxHxD):	53 x 10 x 31 cm
-------------------------------	-----------------

Transport Weight:	3.9Kg
-------------------	-------

Power Requirements

Voltage	90 – 240Vac 50/60Hz
Power	30VA

NEWS 2011

The screenshot displays the FBT software interface, which is divided into several functional areas:

- Top Bar:** Contains icons for file operations (Folder, Save, Print, Copy) and system controls (Project, Input Copy, Output Copy, System Mode, System Setup, Mute, Key, Help, Stop).
- Inputs/Outputs/Overview:** A row of colored buttons for channel selection: Low-A (pink), Low-B (red), Mid-A (cyan), Mid-B (green), High-A (blue), and High-B (orange).
- EQ Section:** Features a large frequency response graph with a grid. The x-axis ranges from 20Hz to 10KHz, and the y-axis ranges from -30 to +30 dB. Below the graph are controls for 'Show cursor', 'Out only', and 'Out • In A/B'. The EQ parameters are as follows:

PEAK EQ	PEAK EQ	PEAK EQ	PEAK EQ	PEAK EQ
145	-7	0	0	0
15000	3000	1000	1000	1000
2.5	3	1	1	1
0.5107	0.404	1.4142	1.4142	1.4142
Byp	Byp	Byp	Byp	Byp
- RMS Compressor:** Includes a 'Routing' dropdown set to 'In B', a 'Delay' control at 0 m, and filter settings (High Pass: 1700 Hz, Low Pass: 20000 Hz). The compressor parameters are:

Threshold [dBu]	Ratio	S/H Knee [%]	Release [sec]	Attack [ms]
20	1:1	0	0.5	250
- Gain and Peak Limiter:** The Gain is set to 0 dB. The Peak Limiter has a Threshold of 20 dBu, Release of 24 ms, and Attack of 21 ms.
- Channel Linking:** A 'Channel Linked' section with buttons for Low-A, Low-B, Mid-A, Mid-B, High-A, and High-B.
- EQ Presets:** Buttons for 'Edit HP filter custom', 'Edit LP filter custom', 'View RMS Compressor', 'View Peak Limiter', 'EQ Flat', 'EQ Byp', and a red 'Mute' button.
